Gear Head Lube 5th Wheel Grease Pad

Product Description

Gear Head Lube 5th Wheel Grease Pad is a soy oil based heavy-duty, water-resistant lubricant. The Grease Pad is a complete 5th Wheel lubrication system, designed to work in any environment. It is designed for rapid deployment and no-mess application, using a solid, water-resistant coated design that breaks apart and lubricates upon trailer loading. Each grease pad is a self-contained lubrication device and can be easily deployed during the shortest stops. The pads are environmentally friendly with minimal waste. Its proprietary design eliminates plastic bag waste, over-greasing, and loss of lubricant due to poor transfer. It is a complete system for 5th Wheel lubrication, outperforming traditional greases while also being a green alternative to less environmentally friendly petroleum products.

Grease Pad Benefits:

- **Amazingly fast application, takes only seconds**
- **Completely clean, no mess involved**
- **No plastic bags or leftover waste to dispose of**
- **Environmentally safe, made from natural soy oil**
- **Long-lasting wear protection and water-resistance, even in harsh conditions**

Typical Applications:

- **All heavy and light-duty 5th Wheel applications**
- **Initial lubrication of top plate**
- **Relubrication of top plate**

Technical Data Sheet

Physical Properties:	Typical
Chemical Type:	Soy Oil Grease
Appearance:	Black Square (Pad) Black Gel (Broken)
Odor:	None (Solid)
Flash Point:	>400° F
Penetration:	NA
Temperature Range:	-40 to 150° F

General Information:

This product is a complete 5th Wheel lubricant when used properly. Improper use may result in incomplete lubrication and damage to top plate and trailer systems.

Directions for Use:

- 1. Remove pads from biodegradable package**
- 2. Normal recommendation is to apply 2 pads, one on each side of the plate. However, the user is responsible for deciding the number of pads needed at each service**
- 3. For 5th Wheel plates that have never been greased, use additional pads**
- 4. Connect the trailer to the 5th Wheel plate, which will crush the pads**
- 5. Rotation of the truck against the trailer will spread the grease, eliminating need for brushing/spreading**
- 6. No environmental waste/additional steps are necessary**

Storage:

The Grease Pad is stable and will not degrade over time. Ideal storage is a cool, dry location. Optimal storage temperature is between 40 – 90° F, with cooler temperatures being preferable. Do not store in direct sunlight. Storage in a hot unattended cab will make the pads softer to the touch requiring more care in handling.
